Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Zhou et al., (hereinafter referred to as "Zhou").

Zhou discloses an image capturing device for capturing an image by an image device (Zhou: column 2, lines 30-50), comprising: a first compression means for compressing and coding a captured image as a moving image (Zhou: column 3, lines 25-30); extracting means for extracting object information relating to a desired object from moving image information obtained in the process of compressing and coding the captured image (Zhou: column 40, lines 35-67; column 41, lines 20-47; column 42, lines 55); image processing means for performing desired image processing on the desired object on the basis of the object information extracted by the extracting means (Zhou: column 4, lines 1-10); second compression means for compressing and coding an image including the desired object processed by the processing means as a still image (Zhou: column 4, lines 17-23); and recording means for recoding on a recording medium at least one of the moving image data obtained by the first compression means and the still image data obtained by the second compression means (Zhou: column 45, lines 1-25), as in claim 1.

Regarding claim 2, Zhou discloses wherein the image processing means can perform a plurality of kinds of image processing and each kind of image processing can be selected for each object (Zhou: column 4, lines 1-37), as in the claim.

Regarding claim 3, Zhou discloses a designating means for designating the desired object (Zhou: column 42, lines 19-28), as in the claim.

Regarding claims 4-5, Zhou discloses a displaying means for displaying the captured image and object information (Zhou: column 14, lines 14-50), as claimed.

Art Unit: 2613

Regarding claim 6, Zhou discloses replacing means for replacing a certain still image by a moving image on the basis of the moving image being located before or after a certain still image in a time base direction (Zhou: column 34, lines 25-60), as in the claim.

Regarding claim 7, Zhou discloses recording means for record image data on a different recording medium in accordance with kind of image (Zhou: column 3, lines 45-55), as in the claim.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Goto discloses an information setting apparatus.
